

## GenAI Empowered Educators

The innovative training program “**GenAI Empowered Educators**” continues with its 2nd cycle, doubling the number of participating educators. The program aims to equip in-service teachers of all specialties in primary and secondary education throughout Greece with the skills needed to effectively and responsibly utilize Generative Artificial Intelligence (GenAI) tools, through a practical approach that focuses on applying this knowledge in their teaching practice from the very next day.

By combining theoretical learning (learning by studying) with hands-on experience (learning by doing), and promoting collaboration among educators, the program enables them - regardless of their technological familiarity level - to discover practical ways to make effective use of GenAI tools, through examples tailored to the specific needs of their subject area. In doing so, they strengthen their educational role and enhance the learning experience, while also contributing to the development of a healthy and balanced relationship between the new generation and GenAI technologies.

The “GenAI Empowered Educators” program is implemented by **The Tipping Point**, in collaboration with **Piraeus** and the **Institute of Educational Policy (IEP)** of the Greek Ministry of Education, Religious Affairs and Sports, within the framework of the Bank’s Corporate Responsibility program “**EQUALL** – For a Society of Equal People”, under the New Generation pillar.
