TIPPING THE POINT

Climate change & energy transition

The **“Climate change & energy transition”** initiative is designed for students from 10 General and Vocational Upper Secondary Schools across Greece, offering them the opportunity to explore the wide range of professions in the energy sector and understand the impacts of climate change and the importance of sustainable energy. It also highlights women’s contributions to the sector and the importance of equal opportunities, encouraging career choices free from gender stereotypes.

To bring this initiative to life, IPTO employees from various specialties, seniority levels, and positions take on the role of mentors and engage in live group sessions with groups of students. Through these discussions, they share their knowledge and experience in the energy field.

Through their participation in the programme, students explore current career prospects in the energy production and transmission sector, while developing awareness of the energy challenges of the 21st century and the importance of sustainable development. They also discover the role of technology, science and innovation in the sector, become familiar with the principles of gender equality in the modern workplace, and learn about the key skills that support their professional development.

The initiative is being implemented, for the 3nd consecutive time, during the 2026-27 school year, with the support of **IPTO** and the valuable contribution of its employees.
