EPAL: Mapping the Future

The **“EPAL: Mapping the Future”** programme is being implemented for the second consecutive school year, expanding its reach **with the aim of empowering 1,500 vocational high school students across Greece.** The programme supports students to recognise their potential, connect their interests and skills with the needs of today’s labour market, and gain the tools they need to plan their career paths.

In its first year, the programme supported 1,076 students from 30 vocational high schools across Greece, giving them the opportunity to explore different career paths and approach their future choices with greater confidence.

Through online discussions with mentors and professionals from various sectors related to their fields of study, students gain a better understanding of day-to-day life in different professions, receive answers to their questions, and learn about labour market requirements, opportunities and prospects.

They also take part in an interactive workshop and an experiential learning activity, through which they discover the skills needed to use GenAI responsibly and effectively, including critical thinking, creativity and problem-solving.

The programme is being implemented for the second consecutive year, for the **2026-27** school year, by **The Tipping Point** in collaboration with **Piraeus**, within the framework of its Corporate Responsibility EQU**ALL**, under the New Generation pillar.
