

## EPAL: Mapping the Future

The **“EPAL: Mapping the Future”** program aims to empower 1,000 Vocational High School students across Greece to recognize their strengths, connect their interests and skills with the needs of today’s labour market, and gain the tools they need to make informed early career decisions.

Through online discussions with mentors from different professional fields, relevant to Vocational Education specialisations, students gain insight into the day-to-day reality of related professions, receive answers to their questions, and benefit from guidance shared by professionals active in the labour market.

At the same time, by taking part in hands-on activities, they develop the essential skills needed for the responsible and effective use of Generative Artificial Intelligence (GenAI) tools, such as critical thinking, problem-solving, and creativity. In this way, they gain the knowledge and practical guidance they need to actively pursue the future they aspire to.

The program is implemented by **The Tipping Point** in strategic cooperation with **Piraeus** in the framework of the Bank’s Corporate Responsibility program “**EQUALL - For a Society of Equal People**” under the **New Generation** pillar.
