

## Empowering Vocational Education students V

The program “**Empowering Vocational Education students V**” is addressed to first and second-year Vocational High School students across Greece, from Crete and Samos to Kalamata and Drama.

Through the program, students:

- **develop** and **cultivate** key soft skills through specially designed workshops, including skills related to the effective use of GenAI tools, strengthening their ability to respond to modern professional environments,
- **explore** professional sectors related to their field of study and gain insight into the requirements of each industry through live group sessions with mentors,
- **prepare in practice** for their entry into the modern labour market by participating in a specially designed mock interview activity, enhancing their confidence in the job search process.

The program is implemented during the 2025–26 school year, marking its **5th** consecutive year, with the support of the **John S. Latsis Public Benefit Foundation**, within the framework of its strategic partnership with The Tipping Point.
