

Exploring the IT sector IV

The “**Exploring the IT sector IV**” program, having already benefited 2,500+ students, is implemented for the 4th consecutive year, aiming to introduce students from 20 Junior and Senior High Schools across Greece to the field of Information Technology (IT) and its diverse career paths and growth opportunities.

Through live group sessions with mentors, professionals working at Netcompany, students engage in discussions and gain insights into the educational pathways leading to specialization in IT, current career prospects, the skills shaping the industry, as well as the importance of responsible technology use at both a corporate and individual level. In this way, the program not only supports young people in preparing for their first steps into the modern labour market, but also strengthens their understanding of digital transformation and online safety, empowering them to protect their digital presence.

The program is implemented with the support of **Netcompany** and the contribution of its employees as mentors, for the 2025-26 school year.
