TeenSkills

"**TeenSkills**", which began four years ago with just 4 participating schools, continues to grow. In the **2026-2027 school year**, it aims to empower students from **30 lower secondary schools**, primarily those in their final year, in remote and hard-to-reach areas of Greece. From Kato Nevrokopi in Drama and Soroni in Rhodes to Lappas in Achaia and Kritsa in Lasithi Crete, the program provides opportunities for learning, inspiration and personal development to young people who often have limited access to such experiences.

Through **live, online group sessions with mentors from a variety of professional fields**, students discover a wide range of professions, learn about current labor market trends and challenges, and broaden their career horizons.

At the same time, through **collaborative, hands-on activities**, they develop important skills such as teamwork, critical thinking, creativity and problem-solving. Applying what they learn, students design and carry out their own projects, proposing creative solutions to real needs and challenges within their local communities.

Program objectives

Through their participation in TeenSkills, students have the opportunity to:

- **Explore** the educational and career options available to them, gaining a fuller understanding of their possibilities and prospects.
- **Gain inspiration and guidance** from professionals across different fields, helping them approach future choices with greater confidence.
- **Develop** valuable soft and digital skills that are essential to their personal and professional growth.
- **Discover** the potential and opportunities within their local area, recognizing how their own ideas and initiatives can make a positive contribution to their community.

The program is being delivered for the 4th consecutive year during the **2026–2027 school year** by **The Tipping Point**, in cooperation with **Piraeus**, within the framework of the Bank's Corporate Responsibility **EQUALL**, under the **New Generation** pillar.
